

CM1605 Web Technology

Tutorial 2

The aim of this tutorial is to use HTML tables to display/organize information, make use of table attributes. Get familiarize with HTML 5 semantic tags to structure web pages, insert images.

This is an individual exercise. You may use any text editor (Notepad, Notepad ++) to create the HTML pages and any Brower application (chrome, IE, firefox etc) to run the web pages.

Note: Use proper indentation and comments where applicable

Part A

1. The following table contain results gained for several dataset used to train a Neural Network for a given AI application. You are required to create a HTML web page to display the following table.

Result Table - AITROM

Algorithm	Data Set Usage			Final Result
	Set 1	Set2	Set 3	
Algorithm 1	Data A1	Data A2	Data A3	0.058
Algorithm 2	Data B1	Data B2	Data B3	1.266
Algorithm 3 ♠	Data C1	Data C2	Data C3	5.697

- a) You may use correct row span/colspan in the table
- b) You may use correct HTML entity to display ' ♠ ' sign in the web page
- c) The table caption is "Result Table – AITROM"
- d) The table headers are center- aligned
- e) The table should have a border with a cellpadding="2" and cellspacing="3"
- f) The final results should appear in red color

Part B

1. You are required to create a web page of an AI application of your choice.
 - a) You need to use the html 5 semantic tags such as header, footer, section,...etc to structure your web page
 - b) Insert an image of the AI application

- c) Insert details of the AI application, organized into the following sections. (hint: use Section tag etc) You may use sub headings, paragraphs, lists, images and some text formatting as required.
- The background of the application
 - The purpose of the application
 - Functions/Features
 - Technologies used
- d) Add an audio/video of the AI application (Use HTML5 semantic tags)
